Gnar.

ERP MODERNIZATION PROPOSAL

Prepared for UTILITYnet

PACKAGE 1 — TECHNICAL PROPOSAL

Submitted by

The Gnar Company

Boston, MA · thegnar.com

In partnership with FractalShift LLC · AI Delivery

Confidential · February 2026

— Proposal Format Note

This document constitutes Package 1: Technical Proposal and contains no pricing information. Pricing is submitted separately in Package 2, completed on the prescribed Attachment 2 — Pricing Worksheet.

TABLE OF CONTENTS

§	Section	Page
5.1	Executive Summary	2
5.2	Vendor Overview	3
5.3a	Proposed Vendor Solution — Solution Architecture	5
5.3b	Proposed Vendor Solution — Methodologies	7
5.3c	Proposed Vendor Solution — Approach	8
5.3d	Proposed Vendor Solution — Implementation Roadmap	9
5.4	Vendor Qualifications	13
5.5	Project Team	14
5.6	Proposed Post-Go-Live Support	17
5.7	Requirements: Vendor Response	19
	Legal Authority Acknowledgment	21
	APPENDICES (not counted toward 35-page limit)	
A	Case Studies — Relevant Experience	A-1
B	AI Roadmap — 3 to 5 Year Vision	B-1
C	Risk Register	C-1
D	Certificate of Insurance — The Hartford	D-1

Note: Page numbers are indicative. Refer to sequentially numbered pages in the submitted PDF.

5.1 EXECUTIVE SUMMARY

UTILITYnet operates at the intersection of complex energy retail, partner marketer relationships, and regulatory compliance — all on a technology stack that was never designed to scale with you. Oracle PL/SQL and Sage 50 served their purpose. Today they are a ceiling, not a foundation. Every workaround adds risk. Every manual process adds cost.

The Gnar Company is proposing a full-stack ERP modernization purpose-built for an Alberta energy retailer. Not a generic enterprise template. Not a rip-and-replace that creates a new set of problems. A modern, AI-enabled platform that handles partner marketer billing, customer data, settlements, and finance in a single coherent system — and hands the keys back to your team, not to a permanent consulting dependency.

— Our Commitment

Fixed-price. Outcome-defined. If it takes us longer than planned, that is our problem, not yours. If we move faster, that efficiency is our reward for excellence. You get certainty. We get accountability.

What We Are Proposing

A phased, application-first modernization structured around business risk and operational continuity. Finance goes first because it is the foundation everything else sits on. Each phase is independently deliverable, has a defined go-live, and produces immediate operational value. The program culminates in full vendor-managed operations post-go-live — a single accountable partner for the ongoing health of the platform.

This proposal is built around a Discovery-first commitment structure. The only binding commitment we are asking UTILITYnet to make today is Phase 0 — an 8 to 10 week deep-dive that produces a complete solution design, a finalized fixed-price roadmap, and a clear decision gate before implementation begins.

Pricing for all phases is submitted separately in Package 2 — Pricing, completed on the prescribed Attachment 2.

5.2 VENDOR OVERVIEW

The Gnar Company — Prime Contractor

The Gnar Company is a Boston-based custom software and engineering firm founded in 2015. We build custom platforms for mid-market and enterprise clients with complex, domain-specific requirements — the clients that off-the-shelf platforms fail. Our team of 40 senior engineers has delivered over 250 engagements across regulated industries including energy, healthcare, financial services, and government.

We deliver on fixed-price, milestone-based terms. Our team is 100% North American. We do not offshore delivery. The senior engineers who scope the engagement are the engineers who build it. Every engagement includes a 12-month bug-free warranty as standard.

FractalShift LLC — AI Delivery Partner

FractalShift is an AI transformation firm founded by former AWS Solution Architects with combined decades of enterprise AI and complex systems experience. FractalShift brings three proprietary capabilities to this engagement:

- LegacyLift — AI-accelerated application modernization and technical debt remediation. LegacyLift reads, understands, and rewrites legacy codebases — including Oracle PL/SQL, COBOL, and aging custom applications — producing documented, tested, modern equivalents. It maps business logic, identifies technical debt, and auto-generates upgraded code at a fraction of the time and cost of manual rewriting. For UTILITYnet, LegacyLift handles the Oracle extraction in Phase 0 and underpins the entire migration quality baseline.
- Birdseye — Conversational data discovery and enterprise analytics. Allows UTILITYnet leadership to query all platform data in plain language, generating reports, dashboards, and insights without dependency on IT.

- Watchdog OS — AI drift correction and autonomous task automation. Embedded throughout the platform, Watchdog monitors data pipelines, billing processes, and integrations for anomalies, correcting issues before they affect operations.

Subcontractor Disclosure

FractalShift LLC is engaged as a delivery subcontractor under a Master Subcontractor Agreement with The Gnar Company. The Gnar Company is the prime contractor, holds all client contractual obligations, and is the single point of accountability. IP protections for FractalShift's proprietary products (LegacyLift, Birdseye, Watchdog OS) are governed by the Master Subcontractor Agreement.

Data Residency — Canada-First Architecture

All UTILITYnet data will reside exclusively in Canada. The platform is hosted on AWS ca-central-1 (Montreal). No compute, storage, database, or data processing occurs outside Canadian jurisdiction. This commitment is enforced at both the infrastructure layer (AWS region-lock) and the application layer (no data routing to non-Canadian endpoints). Data residency is a hard requirement in our solution design, not an add-on.

Security & Compliance

Control	Implementation
Encryption	TLS 1.2+ in transit; AES-256 at rest for all databases and file storage.
Access Control	Role-based access control (RBAC) enforced at application and database layers. MFA required for all staff and admin access.
Audit Logging	Immutable audit trail for all financial transactions, data access events, and configuration changes.
Backup & Recovery	Automated daily snapshots; cross-region replication to secondary AWS Canada region; point-in-time recovery (PITR). RTO and RPO defined in the MSA.
Regulatory	PIPEDA and PIPA compliant. SOC 2-aligned controls. SSC compliant file generation for billing and settlement.
Security Review	Annual external security review with audit readiness support.

5.3 PROPOSED VENDOR SOLUTION

5.3a — Solution Architecture

The proposed solution is an AWS-native, API-first platform purpose-built for UTILITYnet's operational requirements. The architecture is modular, composable, and phased — each module independently deployable and testable, with no single point of failure. The system replaces Oracle PL/SQL, Sage 50, VL Trader, and manual settlement processes with a coherent, integrated platform.

Core Platform Components

Component	Role in Architecture
Sage Intacct (Finance Core)	General ledger, AP/AR, bank reconciliation, financial statements, payroll integration, budgeting, and forecasting. Canadian GAAP compliant. Replaces Sage 50 entirely.
Custom Billing Engine	Partner marketer billing, multi-variable energy pricing, settlement CSV generation, SSC/TBF-compliant file output, REA group billing, budget billing, and pay-as-you-go model. Built to UTILITYnet's exact billing logic.
CEM Portal	Dedicated portal for Community Energy Marketers: rate management, customer listings, commission tracking, income statements, expense reporting, and role-based access for MAs. Replaces UNETGrid and manual CEM workflows.
MyAccount Portal	Customer-facing account management: bill access, rate changes, consumption analytics, ticketing, payment management, solar rate tools, and real-time enrollment status.
Settlement & Data Management	Automated settlement data pipeline (replaces manual spreadsheet); AESO data integration; SSC compliance; hedge portfolio tracking; industrial customer BI reporting via Power BI.
Enrollment & Onboarding	Online enrollment with dynamic plan builder, TransUnion credit check integration, OCR for void cheques, RBC file submission, Air Miles integration, and VL Trader data pipeline replacement.
Birdseye Analytics Layer	Conversational data discovery across all platform data; natural language queries for management; Power BI integration; customer-facing usage analytics and forecasted bills.
Watchdog OS	AI reliability layer embedded throughout: monitors data pipeline health, detects billing anomalies, applies drift correction, and automates routine operational tasks. Not customer-facing.
AWS Canada Infrastructure	All compute, storage, database (RDS/Aurora), networking, API Gateway, Lambda, S3, CloudWatch monitoring, and CI/CD pipelines hosted in ca-central-1 (Montreal).

Integration Architecture

All integrations are API-first with versioned endpoints, monitored by Watchdog OS. Key external integrations include: RBC (payment processing, file submission), TransUnion (credit checks), AESO (price alerts, settlement, renewable forecasting), VL Trader (data pipeline replacement), Air Miles (loyalty program), energy feed providers (consumption data), and document storage services (SharePoint, Google Drive, OneDrive).

The phone system integration (VoIP: Microsoft Teams Phone or RingCentral) is connected via CTI screen-pop to customer profiles. Platform selection is confirmed in Phase 0. All third-party integrations are monitored, with fallback and retry logic built into each integration layer.

5.3b — Methodologies

Our delivery methodology is built on three principles that are unusual in the ERP market and fundamental to how we operate:

1. Fixed-Price, Outcome-Defined Delivery

We do not sell time. We sell transformed, satisfactory outcomes. Every SOW defines the end state before effort is estimated. Pricing reflects the value of the outcome to the client, not our cost to deliver. If a phase takes longer than

planned, we absorb it. If it goes faster, that efficiency is ours — our incentive to be excellent rather than to run up hours. This is not a policy; it is our business model.

2. Discovery-First Scoping

Phase 0 is not a formality. It is the mechanism that makes fixed-price delivery possible. Before any development begins, we extract and document all Oracle PL/SQL business logic (AI-assisted via LegacyLift), validate all requirements through structured workshops with functional SMEs, make architecture and vendor selection decisions, and produce a signed-off Solution Design Document. Phase 1 through 3 fixed-price commitments are issued at the conclusion of Phase 0 within ±15–20% of indicative pricing.

3. Capability Transfer at Every Phase Gate

Programs have phases that compound. We install operating model changes that persist after we leave. If UTILITYnet needs us indefinitely for execution, we have failed. Every phase includes explicit knowledge transfer milestones. We measure success partly by how quickly the client's team can operate independently. Our goal is to make ourselves unnecessary for execution — and indispensable for what comes next.

Delivery Cadence

- Weekly delivery sprint cycles with working software demoed at each sprint end
- Weekly executive status reporting: burn rate vs. milestones, risk register, decisions required
- Formal requirements sign-off at each phase gate via Solution Design Document or equivalent
- Structured change control process with full transparency on impact of any scope change
- Prototype-based validation for complex workflows to confirm requirements before build

5.3c — Approach

UTILITYnet's modernization challenge is not a standard ERP implementation. The partner marketer channel creates billing and settlement complexity that most platforms treat as an edge case. Alberta regulatory obligations add compliance dimensions requiring deep domain integration, not a compliance checkbox. The Oracle PL/SQL codebase contains years of undocumented business logic. We know where the landmines are.

Our approach addresses these challenges directly:

Finance-First Sequencing

Finance goes first (Phase 1) because the GL, AP/AR, and billing foundation enables everything else. A clean financial core removes the single largest operational risk — the entanglement of Sage 50 with downstream billing logic — and provides an immediate, measurable go-live that UTILITYnet can evaluate before committing to subsequent phases.

AI-Accelerated Legacy Extraction

The Oracle PL/SQL codebase is the highest-risk element of the migration. FractalShift's LegacyLift reads the legacy codebase end-to-end — mapping business logic, surfacing technical debt, and generating documented, tested modern equivalents automatically. This transforms Phase 0's most time-consuming task from months of manual analysis to weeks of AI-assisted extraction. The output is a validated, annotated business logic inventory that Phase 1–3 builds directly from, eliminating the guesswork that causes scope overruns on legacy migrations.

Continuous Operational Continuity

No cutover is executed until parallel validation is complete. Each phase includes a hypercare period immediately post-go-live with dedicated on-call support. Integration with legacy systems during transition is maintained until the new platform is fully operational. Rollback procedures are defined in the Phase 0 migration playbook before any build begins.

Single Point of Accountability

The Gnar Company is the prime contractor and sole point of accountability. UTILITYnet works with one team, one contract, and one escalation path. The senior engineers who scope the engagement are the engineers who build it. No B-teams. No handoffs between scoping and delivery.

— Understanding Your Situation

Based on the RFP and Q&A process: legacy systems are deeply entangled with high operational risk; the partner marketer channel adds billing and settlement complexity that off-the-shelf systems handle poorly; finance modernization is the highest-priority first step; UTILITYnet wants full vendor-managed operations post-go-live; an internal business owner will be assigned with decision authority resting with UTILITYnet management. Our phased approach is designed around this reality, not around our convenience.

5.3d — Implementation Roadmap

The program is structured in four phases. Phase 0 is fixed-price and the only commitment requested at signing. Phases 1 through 3 are issued as individual SOWs at the conclusion of Phase 0, with fixed-price commitments confirmed through Discovery findings. All pricing is submitted in Package 2.

Phase 0 — Discovery & Solution Design

Duration: 8–10 Weeks · Fixed-price (see Package 2)

- Full current-state documentation: Oracle PL/SQL business logic extraction (LegacyLift AI), Sage 50 data mapping, integration inventory
- Requirements validation: structured workshops across finance, operations, and partner management
- Architecture decision and vendor selection: platform evaluation, integration approach, data migration strategy
- Alberta regulatory compliance mapping embedded into solution design from day one
- Detailed migration playbook: risk register, sequencing, rollback planning
- Phase 1–3 scope confirmation with updated fixed-price commitment (within ±15–20% of indicative pricing)
- Deliverable: Solution Design Document, finalized Phase 1 SOW, signed-off roadmap

Discovery is the only commitment we are asking UTILITYnet to make today. At the end of Phase 0, you will have everything you need to proceed — or to walk away with a complete blueprint.

Phase 1 — Core Finance — Sage Intacct Go-Live

Duration: 5–6 Months · Fixed-price issued at Phase 0 conclusion

- Sage Intacct implementation: GL, AP, AR, chart of accounts, Canadian GAAP compliance
- Partner marketer billing configuration and automation; CEM commission and income statement engine
- Migration of historical financial data from Sage 50
- Core reporting: financial statements, regulatory reporting, partner billing reconciliation
- Integration with existing operational systems during transition
- User training, documentation, and go-live support
- Hypercare period: 4 weeks of intensive post-launch support

Phase 2 — CRM & Customer Portal

Duration: 4–5 Months · Fixed-price issued at Phase 0 conclusion

- CEM portal: self-serve enrollment, rate management, customer listings, commission dashboards, account visibility
- Customer data platform: unified customer records, consumption history, communication preferences
- MyAccount portal: payments, rate changes, ticketing, solar tools, enrollment status, mobile-responsive
- CRM configuration for partner and direct customer relationship management
- Integration with Phase 1 finance layer for real-time billing visibility
- Customer communication workflows: automated notifications, renewal management, multi-channel ticketing

Phase 3 — Settlements, Integrations & Reporting

Duration: 4–5 Months · Fixed-price issued at Phase 0 conclusion

- Energy data feed integrations: AESO consumption data, market pricing, settlement inputs
- Automated settlement reconciliation with partner marketers; replaces manual spreadsheet process
- Alberta regulatory reporting automation: SSC/TBF-compliant file generation
- Hedging dashboard: portfolio tracking, CFD exposure reporting, approval workflows, KPI generation
- Advanced analytics: Birdseye-powered executive dashboards, operational KPIs, industrial customer self-service reporting
- Full system integration testing and performance validation
- Final knowledge transfer and operational handoff

Program Timeline Summary

Phase 0 — Discovery	Phase 1 — Finance	Phase 2 — CRM / Portal	Phase 3 — Settlements
8–10 weeks	5–6 months	4–5 months	4–5 months
Aug 2026 start (indicative)	Go-live: ~Month 7	Go-live: ~Month 13	Go-live: ~Month 18
Fixed-price	**Fixed-price**	**Fixed-price**	**Fixed-price**

Program start date assumes August 2026 as indicated in the RFP timeline. All dates are indicative and confirmed in Phase 0 planning.

5.4 VENDOR QUALIFICATIONS

The Gnar Company brings direct, validated experience in the domains most critical to UTILITYnet's modernization: complex energy pricing platforms, real-time energy data pipelines, AWS-native enterprise delivery, and fixed-price program management in regulated industries.

Qualification	Evidence
Energy Pricing Complexity	Truelight Energy: built a multi-variable electricity pricing platform handling Energy, Capacity, Transmission, Ancillaries, RPS, Losses, and Margin components — directly analogous to UTILITYnet's billing and rate requirements. (See Appendix A.)
Energy Data Pipelines	Linemeter: built a real-time energy data pipeline from utility smart meters through cloud processing to consumer dashboards, integrating with utility infrastructure at the data layer.
Fixed-Price Delivery	250+ engagements delivered on fixed-price, milestone-based terms across energy, healthcare, financial services, and government. No T&M optionality.
AI Transformation	FractalShift has delivered AI-accelerated legacy modernization at enterprise scale via LegacyLift, with Oracle PL/SQL extraction specifically validated in enterprise modernization engagements.
Managed Services	The Gnar Company provides ongoing vendor-managed operations post-go-live as a standard service offering, with dedicated operational teams across multiple active long-term client relationships.
Team Size & Stability	40 senior North American engineers. No offshore delivery. Dedicated teams — no resource juggling across accounts.

Full case studies are provided in Appendix A, including project scope, technical architecture, and direct relevance to UTILITYnet's requirements.

— Why This Is Harder Than It Looks

Energy retail ERP modernization is not a standard implementation. The partner marketer layer creates billing and settlement complexity that most platforms treat as an edge case. Alberta regulatory obligations add compliance dimensions that require deep domain integration, not a compliance checkbox. We know where the landmines are.

5.5 PROJECT TEAM

No B-teams. No handoffs. The people named below are the people who will do the work. Our team includes a Project Director, Solution Architect, Finance Systems Lead, Integration Engineers, Front-End Engineers, QA Lead, and a dedicated Client Success Manager through go-live and into managed services. Full team profiles are available upon request.

Ethan Chang — AI Delivery Lead & Solution Architect

FractalShift LLC · AI & Legacy Systems

Role on Engagement	AI delivery lead, Oracle PL/SQL extraction lead (LegacyLift), Birdseye analytics deployment, Watchdog OS integration, AI roadmap delivery.
Background	CEO of FractalShift LLC; former AWS Solution Architect with combined decades of enterprise AI transformation and complex systems architecture. Co-founded FractalShift alongside three former AWS colleagues to specialize in the intersection of deep enterprise systems expertise and AI fluency.
Relevant Experience	Led AI-accelerated legacy modernization engagements at enterprise scale. Architect of LegacyLift (Oracle PL/SQL AI extraction), Birdseye (conversational data discovery), and Watchdog OS (AI drift correction). Deep expertise in AWS architecture and regulated industry AI transformation.

Nick Maloney — Co-Founder & CTO, Architect of Record

The Gnar Company · Engineering Leadership

Role on Engagement	Architect of record; technical accountability for all platform decisions, integration design, and delivery quality.
Background	Co-Founder and CTO of The Gnar Company. 20+ years of software development experience. Prior to Gnar: Mass General Hospital, MeYou Health, State of Massachusetts. Has led delivery for enterprise health-tech, energy platforms, and government systems.
Relevant Experience	Architect of the Truelight Energy electricity pricing platform and Linemeter smart meter infrastructure. Repeated experience translating complex energy domain logic into scalable, maintainable platform architecture.

Mike Stone — Co-Founder, Engineering Lead

The Gnar Company · Delivery Management

Role on Engagement	Sprint cadence ownership, delivery risk management, engineering team coordination, and velocity accountability across all phases.
Background	Co-Founder of The Gnar Company. 10+ years leading engineering teams. Prior experience: LevelUp (acquired by Grubhub), eZCater (startup scale-up). Co-founded an additional software company, demonstrating pattern of building from zero to production at scale.
Relevant Experience	Managed delivery on multiple concurrent fixed-price engagements for enterprise clients, with specific experience in high-stakes go-live coordination and post-launch stabilization.

Pete Whiting — Co-Founder, Client Director & Executive Sponsor

The Gnar Company · Client Relationship & Strategic Oversight

Role on Engagement	Executive sponsor; escalation point for UTILITYnet leadership; ensures strategic alignment, contract governance, and long-term partnership health.
Background	Co-Founder of The Gnar Company. Brown University BS/MS (Materials Science); UCLA Anderson

	MBA. Head of Growth and Client Service at Gnar. Combines technical fluency with enterprise business development and client management experience.
Relevant Experience	Executive client relationship for Gnar's largest multi-year managed services engagements. Specific experience managing executive relationships in regulated industries where trust, accountability, and long-term partnership are the primary client objectives.

Additional team members (Finance Systems Lead, Integration Engineers, Front-End Engineers, QA Lead, Client Success Manager) will be assigned at project initiation. Full team profiles with CVs are available upon request.

5.6 PROPOSED POST-GO-LIVE SUPPORT

UTILITYnet has indicated a preference for full vendor-managed operations post-go-live. We will own it. Our managed services engagement covers the complete ongoing operational lifecycle — not a reactive help desk, but a proactive operational partner. Pricing for managed services is submitted in Package 2.

Service Scope

Service Area	Scope
Help Desk & User Support	Tier 1–3 support; business hours standard coverage plus 24/7 on-call for P1 Critical incidents. Single point of contact for all platform issues.
Platform Releases & Upgrades	Sage Intacct version upgrades, AWS infrastructure updates, platform dependency management — all managed and deployed by Gnar. No client effort required.
Integration Monitoring & Maintenance	All energy feeds, Sage Intacct, RBC payment systems, AESO data pipelines, partner systems, and third-party integrations proactively monitored and maintained.
Bug Fixes & Stability	Defect resolution within agreed SLA tiers. Watchdog OS provides first-line automated detection and triage before escalation to the human support team.
Regulatory Reporting Execution	Alberta compliance report generation and submission support; SSC/TBF-compliant file management.
Application Maintenance Services (AMS)	Routine maintenance, performance optimization, security patching, and minor configuration changes without additional SOW. Included in retainer scope.
New Features & Enhancements	Scoped separately via addendum SOW — not included in retainer. Hourly resource rates apply (see Package 2).

Service Level Agreements

Priority	Definition	Initial Response	Target Resolution
P1 Critical	System down, billing halted, or data integrity compromised	30 minutes	4 hours

P2 High	Major feature unavailable; significant business impact	2 hours	1 business day
P3 Medium	Non-critical degradation; workaround available	4 hours	3 business days
P4 Low	Cosmetic issues, minor requests, feature questions	1 business day	Next sprint

Governance

Managed services is governed by the Master Services Agreement with an annual Managed Services Agreement addendum (annual renewal). Weekly operational health reporting provided to UTILITYnet's designated business owner. Monthly SLA performance review. Quarterly executive business review.

The Gnar Company is invested in building something maintainable. We are not going to hand over a system and disappear. We will be running it alongside you.

5.7 REQUIREMENTS: VENDOR RESPONSE

Completed responses to all 207 business requirements and 27 optional requirements (Attachment 1 — Requirements Response Form) are submitted alongside this proposal. The table below summarizes our response posture by category. Zero requirements are marked N (cannot comply).

Response Code Definitions

Code	Meaning
Y	Full compliance via standard platform capability or Sage Intacct configuration. Available at go-live without custom development.
F	Delivered within this engagement per the phased implementation roadmap (Phases 1–3). Included in phase fixed-price commitments.
C	Custom development required. Achievable and scoped in Phase 0. Included in Phase 1–3 fixed-price commitments.
T	Met via recommended third-party integration included in the managed architecture. Integration included in implementation scope.
N	Cannot comply. (Zero N responses across all 207 requirements.)

Requirements Response Summary by Category

Category	Comply (Y)	Phase (F)	Custom (C)	3rd Party (T)
A: Sign Up & Enrollment (49 requirements)	0	45	3	0
B: Energy Marketers (20 requirements)	0	20	0	0

C: Billing (29 requirements)	2	27	0	0
D: Customer Services (23 requirements)	0	22	0	1
E: Marketing & Communication (10 requirements)	0	7	0	3
F: Technology Services (13 requirements)	9	4	0	0
G: Data Management / Settlement (27 requirements)	0	27	0	0
H: Hedging (10 requirements)	0	0	10	0
I: Finance & Accounting (17 requirements)	10	7	0	0
J: Non-Functional (10 requirements)	10	0	0	0
TOTAL (207 requirements)	**31**	**159**	**13**	**4**

Y = Standard platform. F = Delivered in this engagement per phased roadmap. C = Custom build, scoped in Phase 0. T = Third-party integration (phone system: sections D16, E1, E8, E9). N responses: zero.

The 4 T responses reflect the phone/VoIP system (e.g., Microsoft Teams Phone or RingCentral), which is not built — it is integrated. Platform selection is confirmed in Phase 0. All integration costs are included in implementation pricing.

Attachment 1 — Requirements Response Form (completed) is submitted alongside this proposal. Each of the 207 business requirements and 27 optional requirements includes a response code and detailed supporting commentary.

LEGAL AUTHORITY ACKNOWLEDGMENT

The undersigned hereby formally acknowledges and represents, on behalf of The Gnar Company, that:

- They have the legal authority to sign and submit this proposal response on behalf of The Gnar Company.
- The information contained in this proposal is accurate, complete, and submitted in good faith.
- The Gnar Company agrees to be bound by the terms of this proposal submission for the duration specified in the RFP.
- The Gnar Company has read, understood, and acknowledges the RFP requirements, evaluation criteria, and submission conditions.
- All pricing submitted in Package 2 is accurate, in Canadian dollars, and inclusive of all costs as described in the pricing definitions.

Authorized Signature

Pete Whiting, Co-Founder — The Gnar Company

Date

February 2026

Terms and Conditions: The Gnar Company's proposed contract terms and conditions, including Master Services Agreement template, Managed Services Agreement template, and Statement of Work template, are provided as a separate attachment to this submission.

A APPENDIX A — RELEVANT EXPERIENCE & CASE STUDIES

The following engagements demonstrate The Gnar Company's direct competency in the domains most critical to UTILITYnet's modernization. All engagements were delivered on fixed-price, milestone-based terms.

Truelight Energy · Next-Generation Electricity Pricing Platform

Energy Analytics · Web Application · Ruby on Rails

Truelight Energy's Excel-based pricing models had become unscalable — too complex and too slow for the volume of pricing calculations their business required. Gnar replaced those spreadsheets with a purpose-built electricity pricing platform.

The platform handles multi-variable energy price calculations across: Energy, Capacity, Transmission, Ancillaries, RPS, Losses, and Margin. It includes account management for enterprise clients, energy market data ingestion, CSV-based bulk usage uploads, quote generation and tracking, and a custom API allowing high-volume clients to submit account data and receive calculated prices programmatically.

Relevance to UTILITYnet

- Complex, multi-variable energy pricing logic built into a production-grade web platform — directly analogous to UTILITYnet's billing and rate management requirements for gas, electricity, and bundled services.
- Energy market data ingestion and management by platform administrators — mirrors UTILITYnet's AESO feed integration requirements.
- Multi-client account structure: accounts, opportunities, quotes, and proposal tracking — analogous to UTILITYnet's CEM and partner marketer management layer.
- Bulk data processing via custom API: directly parallel to UTILITYnet's settlement data pipeline and VL Trader integration replacement.
- Discovery-first delivery: requirements, user flows, and architecture defined before any development began.

Linemeter · Real-Time Home Smart Meter Monitoring

Energy & IoT · Web Application + IoT Device · Ruby on Rails, React

Consumer electric smart meters provide real-time usage data but offer no consumer-facing visibility. Linemeter set out to close that gap. Gnar built both the IoT prototype hardware and the cloud platform to support it.

The solution uses RTL-SDR technology to read data directly from utility company smart meters, process it, and store it in the cloud in real-time. The consumer web application displays live energy usage data, giving residential customers the real-time insights their utility providers couldn't offer.

Relevance to UTILITYnet

- Direct integration with utility company smart meter infrastructure — reading, processing, and storing live energy data at the source. Validates our ability to handle UTILITYnet's AMI meter integration requirements.
- Real-time data pipeline from physical hardware through cloud processing to consumer-facing application — mirrors UTILITYnet's daily usage data feed requirements for pay-as-you-go billing.
- Validated that utility smart meter data can be surfaced to consumers in real-time with minimal overhead — direct evidence of customer-facing energy data capability.

B APPENDIX B — AI ROADMAP: 3 TO 5 YEAR VISION

UTILITYnet's non-functional requirements (J8, J9, J10) specify mature AI capabilities, agentic workflows, and a documented 3–5 year AI roadmap with ethical compliance. This appendix addresses those requirements directly.

The FractalShift platform embedding (Birdseye + Watchdog OS) provides the AI foundation from day one. The roadmap below shows how AI capabilities deepen and expand across the program lifecycle and beyond.

Year 1 — AI Embedded in the Foundation (Phases 0–3)

- LegacyLift AI-accelerated extraction: Oracle PL/SQL business logic fully mapped, technical debt inventoried, and modern equivalents generated. Reduces Phase 0 legacy analysis from months to weeks. The upgraded code baseline is cleaner, documented, and maintainable — not just a port of the old logic.
- Sage Intacct AI reconciliation: Watchdog OS monitors AP/AR data for anomalies; flags exceptions before they reach the finance team.
- Birdseye Phase 1 deployment: Conversational analytics for UTILITYnet leadership. Natural language queries across financial data, customer data, and billing records.
- Watchdog OS real-time drift detection: All data pipelines (RBC, AESO, VL Trader replacement, settlement) monitored with automated anomaly correction.

Year 2 — AI Across the Partner Channel

- Partner marketer intelligence: Birdseye surfaces CEM performance patterns, commission trends, and customer acquisition efficiency across the full marketer network.
- Settlement automation deepens: AI-assisted reconciliation identifies and resolves a growing percentage of settlement discrepancies without manual intervention.
- Alberta regulatory reporting automation: AI pre-validates compliance reports before submission, reducing error rates and manual review time.
- Customer insights at scale: Birdseye processes customer data across 100K+ accounts to surface churn indicators, rate optimization opportunities, and usage anomalies.

Year 3–5 — AI-Native Operations

- Agentic workflows for routine operations: Watchdog OS autonomous agents handle enrollment processing exceptions, billing error resolution, and routine settlement tasks without human intervention (with human oversight gates).
- Predictive hedging support: Machine learning models trained on historical pool price, weather, and usage data provide forward-looking inputs to UTILITYnet's hedging strategy.
- Fully conversational BI across all domains: Birdseye enables any authorized user to query finance, operations, customer, settlement, and hedging data in plain language. No dependency on IT for data access.
- Continuous improvement loop: Every engagement pattern learned by Watchdog OS feeds back into the model, compounding accuracy over time.
- AI governance framework: Documented ethical AI practices including auditability of all AI-assisted decisions, human-in-the-loop controls for high-stakes actions, and quarterly AI performance and bias review.

C APPENDIX C — RISK REGISTER

The following risks are identified for the UTILITYnet ERP modernization program. Each risk is rated by likelihood and impact and paired with a specific mitigation strategy. This register is a living document — updated and reviewed at each phase gate.

Risk	Likelihood	Impact	Mitigation
Undocumented Oracle PL/SQL business logic	High	High	LegacyLift AI extraction in Phase 0 surfaces and documents logic comprehensively before any Phase 1 development begins. Phase 0 deliverable includes validated business logic inventory signed off by UTILITYnet.
Scope expansion during build phases	Medium	High	Fixed-price SOWs with formal change control. Any scope change requires written assessment of timeline and cost impact before approval. Phase 0 Solution Design Document is the baseline.
Sage Intacct energy billing configuration complexity	Medium	Medium	Finance Systems Lead with Sage Intacct specialization assigned full-time to Phase 1. Fallback: custom billing module if standard configuration cannot accommodate partner marketer complexity (scoped in Phase 0).
Legacy data quality issues in migration	High	Medium	Data profiling executed in Phase 0; cleansing rules defined and agreed before migration. Rollback procedures defined per migration batch. Parallel running during transition.
UTILITYnet resource availability for workshops and sign-offs	Medium	Medium	Asynchronous review options built into all milestone processes. Structured workshop scheduling agreed at Phase 0 kickoff. UTILITYnet business owner onboarded in Phase 0 to understand and exercise decision authority.
Partner marketer adoption of new portal	Low	Medium	Change management plan includes CEM-specific onboarding, training, and phased rollout. CEM portal designed with direct input from representative marketers during Phase 2.

Alberta regulatory compliance validation	Low	High	Compliance mapping embedded in Phase 0 solution design. AESO/AUC requirements validated before Phase 3 build. Regulatory reporting tested against live compliance requirements pre-go-live.

D APPENDIX D — CERTIFICATE OF INSURANCE

The Gnar Company maintains commercial insurance through Hartford Underwriters Insurance Company (NAIC# 30104). The Certificate of Insurance is attached immediately following this page as issued by The Hartford Business Service Center on February 23, 2026.

Coverage Summary

Coverage Type	Policy Number	Limits / Details
